benitovark@gmail.com • +44 7850 419353 • [LinkedIn](#) • [Website](#)

Skills

Languages: JavaScript, HTML, CSS/SCSS, Python, SQL, Mongo, JSON, Matlab, BASH

Libraries & Frameworks: React, Typescript, NodeJS, Express, MUI, Tailwind

Tools: AWS (Certified Cloud Practitioner), Docker, Figma, Jest, Swagger, Cypress, Git, GitHub, Jira

Experience

Raytheon UK – Software Engineer

2022 – Present

- **App Dev:** Created mission-critical web applications that streamlined leadership operations, reducing manual processes by implementing automated workflows using React, NodeJS and many AWS services (RDS, DynamoDB, Cognito, Fargate and ECS).
- **Technical Leadership:** Led design and development for multiple projects, including the fastest concept to production deployment within the space. Ensuring high-quality product delivery and direct alignment with product owners while increasing team velocity using Jira and Confluence for documentation and management.
- **Cyber Research Initiative:** Initiated and extended a successful cyber vulnerability research project, showcasing analytical skills and attention to detail.
- **Full-Stack Proficiency:** Developed secure APIs and stylish, accessible UIs for multiple full-stack applications, specializing in React, Typescript, NodeJS, Mongo and AWS with testing using Jest and Cypress.
- **DevOps Integration:** Applied CI/CD practices to streamline development processes by using tools like Docker (Compose), CodePipeline and ECR.
- **Agile Value Delivery:** Implemented agile methodologies while demonstrating outstanding teamwork for continuous value delivery; particularly by peer reviewing code, pair programming and contributing to stand-ups. Frequently assumed a Scrum Master role, leading retros and sprint planning sessions.
- **Collaboration Efforts:** Gave presentations and workshops on project progress and company specific topics to spread knowledge and promote collaboration.

Education

University of Leeds – Masters in Mechanical Engineering

2018 – 2022

Grade: **First Class**

- Led team project to design, simulate and manufacture a novel flexible petri dish for cellular straining, focusing on commercialization and precision.
- Independently developed a viable robot waiter through robotics design and simulations (Webots).
- Advanced algorithm and systems modelling (Matlab) to engineer and build a powered Mars rover.

A-Levels

2016 – 2018

Grades: Maths **A*** • Further Maths **A** • Physics **A** • Chemistry **B** • EPQ ("Effects of Super-AI") **A**

Projects

PTO Tracking App

- Built a full stack application to request and track holidays on commercial level.
- Led a small team using agile working methods to deliver continuously.
- React Typescript, NodeJS and MongoDB were used for the application, along with AWS services (Cognito, EC2, CDK, and CodePipeline) for authentication, hosting and infrastructure.

Film Metrics App

- Developed a scalable social platform processing data for 133,000+ films, implementing efficient caching strategies and pagination to handle high-volume API requests
- Created custom SCSS components to provide a responsive and innovative user experience.

Mars Rover

- Designed and manufactured an electric buggy to race over a planetary terrain course.
- Using CAD and Matlab to optimize suspension systems.
- Precise manufacturing with technical drawings to ISO standards.
- Top 5% of the competition based on metrics of speed, creative design and manufacturing integrity.
